UAE-based architecture and design firm, *supercar capsule*, transforms home garages into bespoke luxury showrooms for supercar enthusiasts. From early conception and customized design ideation stages, to construction management, the group of designers and engineers bring life to 'every big boy's dream'. Constructed with high grade materials and built-in LED lights, every supercar capsule provides a unique aesthetic experience for its client and their guests.

tailored to meet the desires of each client with premium quality materials, every supercar capsule provides a unique aesthetic experience. powered by an italian consultancy firm [ASZarchitetti group](#), with over 20 years of experience in the luxury retail industry, *supercar capsule* takes comprehensive consideration of the clients garage space and the overall form of their supercar to produce the ideal showroom solution.

the company offers four different design alternatives – villa extension, box refurbishment, detached box and mechanized tower. *villa extension* allows clients to install a completely new 'box' garage, outside of the house, and merge it to the interior of the house; *box refurbishment* is for those looking to remodel their existing garage space; *detached box* is a great way for people to display their supercar in a sculptural way, detached from the house – either on their backyard or poolside; *mechanized tower* builds layers on top of the detached box, as an efficient way to optimize space for more than two cars.

'not only do we give a distinctive character to your villa, with iconic customized auto ports, but we also help you to really bring your supercar in the daily life,' explains supercar capsule. *'whether it's sport, luxury or vintage, your car is a masterpiece of technology and design: too beautiful to be parked undercover in a dusty garage..... not to be enjoyed only in motion too.'*

mechanized tower – two level parking slot placed outside the house

detached box – outdoor luxury showroom placed poolside.
